

Modular Versatile

Force Protection

The threat changes daily. And so do your force protection requirements.

With Geocell's Rapid Deployment Fortification Wall (RDFW) you can quickly create a wide variety of compartmentalized, hardened structures—bunkers; barracks; vehicle fighting positions; revetments for aircraft, fuel, ammunition and vital equipment; artillery emplacement shelters; command posts.

And RDFW is fast.

Using just a loader or other piece of earthmoving equipment, a seven-person crew can construct 100 feet of RDFW 4 feet high in just one hour. That means your forces can be protected far more quickly than with traditional sandbag fortifications, allowing you to adapt more rapidly than the changing threat environment.

Each RDFW unit stands 48 inches thick, 48 inches wide, and 8 inches tall. The units interlock horizontally and vertically to form walls from eight inches up to six feet in height. Corner units can be placed at any point in the wall to easily surround an existing structure, or to create separate compartments within an RDFW fortification.
