

Rapid Deployment = Greater Protection

In modern warfare, speed and mechanization can be just as decisive as firepower. Speed of deployment, speed of emplacement, and speed of maneuver are all critical aspects of victory.

With Geocell's Rapid Deployment Fortification Wall (RDFW), you dramatically increase the speed with which you can emplace your forces. RDFW provides you a means to leverage your earthmoving machinery to quickly create hardened positions, rather than relying on the incredibly slow method of hand-filling individual sandbags. With RDFW, your forces are protected much sooner than they could possibly be with sandbags.

RDFW vs. Sandbag Comparison: 100-foot wall, 4 feet high

With RDFW, a crew of six laborers and one loader operator can build a wall 100 feet long, four feet wide and four feet high in one hour. An equivalent sandbag wall requires 35 laborers over 19 hours to construct.
